Vsesoyuznaya konferentsiya po treniyu i iznosu v mashinakh. 3d, 1958.
Iznos i iznosostoykost'. Antifrictionnyye materialy (Wear and Wear Resistance. Antifriction Materials) Moscow, 1958-vo AN SSSR, 1960. 273 p. Khrata slip inserted. 3,500 copies printed. (Series: Ita: Trudy, v. 1)
Sponsoring Agency: Akademiya nauk SSSR, Institut mashinovedeniya. Resp. Ed.: M. M. Khrushchov, Professor; Eds. of Publishing House: M. Ya. Klebanov, and S. L. Orlik; Tech. Ed.: T. V. Polyakova.

PURPOSE: This collection of articles is intended for practicing engineers and research scientists.

COVERPAGE: The collection published by the Institut mashinovedeniya, AN SSSR (Institute of Science of Machines, Academy of Sciences USSR) contains papers presented at the III Vsesoyuznaya Konferentsiya po treniyu i iznosu v mashinakh (Third All-Union Conference on Friction and Wear in Machines) which was held April 9-15, 1958. Problems discussed were in 5 main areas:
1) Hydrodynamic Theory of Lubrication and Friction Bearings (Chairman: Ye. M. Gut'yar, Doctor of Technical Sciences, and A. E. D'yachkov, Doctor of Technical Sciences); 2) Lubrication and Lubricant Materials (Chairman: G. V. Vinogradov, Doctor of Chemical Sciences); 3) Dry and Boundary Friction (Chairman: B. V. Deryagin, Corresponding Member of the Academy of Sciences USSR, and I. V. Kragel'skiy, Doctor of Technical Sciences); 4) Wear and Wear Resistance (Chairman: M. M. Khrushchov, Doctor of Technical Sciences); and 5) Friction and Antifriction Materials (Chairman: I. V. Kragel'skiy, Doctor of Technical Sciences). Chairman of the general assembly (on the first and last day of the conference) was Academician A. A. Blagonravov. L. Yu. Frumanskiy, Candidate of Technical Sciences, was scientific secretary. The transactions of the conference were published in 3 volumes, of which the present volume is the first. This volume contains articles concerning the wear and wear resistance of antifriction materials. Among the topics covered are: modern developments in the theory and experimental science of wear resistance of materials, specific data on the wear resistance of various combinations of materials, methods for increasing the wear resistance of certain materials, the effects of friction and wear on the structure of materials, the mechanics of the soiling of metals, the effect of various types of lubricating materials on mixing, abrasive wear of a material, modern developments in antifriction materials, and the effects of finish machining on wear resistance. Many personalities are mentioned in the text. References accompany most of the articles.

TITLE: Slip bearings of AST-T plastic and of its compositions

SOURCE: Vestnik mashinostroyeniya, no.1, 1967, 45-47

TOPIC TAGS: bearing material, antifriction bearing, wear resistance, friction coefficient, plastic, bronze/ AST-T plastic, Br. OTsS 6-6-3 bronze

ABSTRACT: The results of tests of slip bearings with bushings of AST-T plastic are discussed. The bearings operated in oil on a test bench with three working friction sections. The AST-T plastic contained fillers of S-1 colloidal graphite, barium sulfate, zinc oxide, and talc. For comparison, bushings of Br. OTsS 6-6-3 bronze were also studied. It was found that increasing the filler content above 5--10% caused practically no improvement in the antifriction properties of the bushings (see Fig. 1). The wear resistance and bearing capacity of the AST-T bearings applied to the GA-301 pump were tested. The resistance of AST-T was found to be 1.64 times greater than that of capron. After 1200 hrs of operation in oil, the bearing capacity of the AST-T bearings was no less than that of the capron and bronze ones.

TITLE: A Simplified Method for the Solution of Frame Problems in Terms of Deformations (Uproshchennyi metod resheniya ram v deformatsiyakh)

PERIODICAL: V sb.: Issledovaniya po teorii sooruzheniy. Nr 7, Moscow, Gosstroyizdat, 1957, pp 495-510

ABSTRACT: The paper develops the idea of Van Guan-yuan' (Kharbin Polytechnic Institute, Chinese People's Republic), arriving at the use of a more highly developed fundamental system than the usual one. The special characteristic of the simplification proposed here consists in the fact that a part of the unknown quantities is eliminated at the stage of the establishment of the canonical system of equations. As compared with the classical method the elimination of the part of the unknown quantities consumes additional time (construction of several auxiliary curves and computations). At the end of the paper the author provides a method for the calculation of multi-story multi-bay frames for three cases, when the influence of displacements is insignificant. The loads are divided into groups that act upon adjacent spans. The influence of these

A Simplified Method for the Solution of Frame Problems (cont.)

loads on the bending moments in the more remote beams is small. Therefore, the rotations of only the nearest joints are considered. Summation is performed at the concluding stage of the calculation. A similar method is employed in the solution of infinite regular systems of equations with the use of abbreviated systems [Kantorovich, L. V., Krylov, V. I., Priblizhennyye metody vysshego analiza (Approximate Methods of Higher Analysis). Moscow-Leningrad, Gostekhizdat, 1949, paragraph 2, p 30].

Title: Production of High-Quality Baskunchak Salt by Purification

Original

Periodical: Tr. Vses. n.-i. in-ta solyanoy prom-sti, 1954, No 1, 4-31

Abstract: The results from experiments (in the pilot plant with a capacity of 6 t/hr) on the purification of Baskunchak salt from 0.5-0.8% muddy impurities (giving the salt a dirty yellow color) to an impurity content of 0.04-0.05% are presented. Table salt is obtained by the purification of the salt by washing the crushed salt (particle size 0.8-1.2 mm) with brine. A method has been developed for the production of high-quality table salt from Baskunchak and other salts. The economic feasibility of the construction of plants in the consumer regions is also shown.

TITLE: Electrical Slag Welding of Low-carbon Steel Parts
(Elektroshlakovaya svarka detaley iz malouglerodistoy stali)

PERIODICAL: V sb.: Raboty M-va elektrotekhn. prom-sti SSSR po mekhaniz.
i avtomatiz. mar. s. kh-a. Vol 2, Moscow, 1956, pp 150-153

ABSTRACT: The plant "Elektrosila" has adopted an electrical slag welding process (ESW) for low-carbon discs 40-140 mm thick and having a 2200-4800 outside diameter. The welding of discs from two half-rings is accomplished by means of the automatic unit A-372 (700-750 amp. a.c.) which employs 1-2 welding wires of SV-08 steel 3 mm in diameter, in the presence of AN-348 flux; the parts involved are held in a vertical position by means of two fixtures. The mechanical properties of the seams (σ_b 40-45 kg/mm² and φ 180°) meet the requirements necessary for parts intended for electrical machines of welded construction. The ESW is 2.8 times less expensive than the automatic welding performed by the ADS-1000-2 unit, and 5.3 times less expensive than welding performed manually with the employ-

Electrical Slag Welding of Parts From Low-carbon Steel

ment of OMM-5 electrodes. Techniques for the assembly and for the ESW of discs are presented, also operating conditions of detailed technical and economic data for manual welding with OMM-5 electrodes, welding by means of the automatic ADS-1000-2 unit, and the ESW with the automatic A-372 unit. For welded constructions fabricated by means of ESW, killed low-carbon steel is recommended.

Title : On the theory of stability of motion

Periodical : Prikl. mat. i mekh., 18, 125-127, Jan/Feb 1954

Abstract : Considers a linear system of equations of disturbed motion with variable, continuous and bounded coefficients. Uses the idea of Lyapunov functions to formulate and prove two theorems, one on stability, and the other on the asymptotic quality of stability. The article concludes with a brief application of these theorems to transformations of systems of equations.

 TITLE Stability in the Case of Parametric Disturbances (Ustoychivost' pri parametricheskikh vosmuscheniyach).
 PERIODICAL Prikladnaia Matematika i Mekhanika, 1957, Vol 21, Nr 1, pp 129-132 (U.S.S.R.)
 Received 3/1957 Reviewed 5/1957
 ABSTRACT The structure of the disturbances investigated here is fully determined by the field of the principal forces of the undisturbed motions. The physical origin of the disturbing forces is here connected with the disturbance of the various kinds of physical parameters, which go over into the differential equations of the motion of any material system. The totality of motions may be assumed to be described by the differential equations $dy_s/dt = f_s(t, y_1, \dots, y_n, a_1, \dots, a_n)$ ($s = 1, \dots, n$), $da_j/dt = 0$ ($j = 1, \dots, k$). The author separates a certain undisturbed motion $y_s = \varphi_s(t)$, $a_j = d_j$, and introduces the deviations $x_s = y_s - \varphi_s$, $\epsilon_j = a_j - d_j$ of all other motions that are possible in the system under investigation. By means of these substitutions a differential equation for the disturbed motion is obtained. The disturbing forces here have a strictly determined character. The above mentioned differential equations are based directly or indirectly on a satisfactory agreement with the experiment. In the case of the experiments certain disturbing forces will act even in the case of the greatest correctness of the theory, because the parameters are disturbed. The various possibilities of agree-

Stability in the Case of Parametric Disturbances.

PA - 2219

ment between theory and experiment are discussed. The deliberations made here are based on the ideas of LYAPUNOV and G.N. CHETAYEV. The following conclusions are, among others, drawn: To satisfy the demands of stability with disturbing forces of any structure is obviously too great and too unjustified a sacrifice, because it entails renouncing the mechanics of conservative systems, giving up the model of smooth bindings, etc. The algorithmic methods for the investigation of the stability of a motion with parametric disturbances belong to those theorems which are similar to those of LYAPUNOV (or more accurately to his second method). The problem without becomes more complicated. Above all a method should be developed which is connected with the construction of definite integrals (with respect to the sign) for the disturbed motions.

TITLE: Snow Fences With an Active Effect (Snegozashchitnyye ustroystva aktivnogo deystviya)

PERIODICAL: Gornyy Zhurnal, 1958, Nr 1, pp 69-71 (USSR)

ABSTRACT: Fences with an "active" principle of action are extensively used in the Noril'sk Combine for the protection of railways and highways from snow-drifts. The principle of action of these fences is increasing the speed of snow flux by a compression plane, and thus blowing the snow off the road bed. The best effect of such fences is observed in winds with velocities exceeding 8 m/sec. The author describes various types of these snow fences and gives results of their effect established during the last two winters. It was established that the road beds remained clear during snow-storms blowing from various directions; the snow was carried 6 to 8 m away from the fence and settled beyond the limits of the road. The author concludes that these fences should be used widely for the protection of open mines.

Vybor i raschet drossel'nykh reguliruyemykh organov (Selection and Design of Throttle Controlling Devices) 2d rev. and enl. ed. Moscow, Gosenergoizdat, 1960. 160 p. 7,000 copies printed.

Ed.: A. S. Meleyev; Tech. Ed.: G. Ye. Larionov.

PURPOSE: This book is intended for engineering and technical personnel concerned with problems of automatic control of technological processes.

COVERAGE: The book discusses the theoretical principles and design methods of throttle controlling devices with consideration of the operating mass-flow rate characteristics. The characteristics of some of the most widespread designs of control devices are given. Calculation examples and nomograms are presented which facilitate the computations. This edition of the book, the second, has been supplemented with a description of a whole series of new control valves, the characteristics of which were published during the last two
